

Nightlock Alert

Door Barricade and Notification System

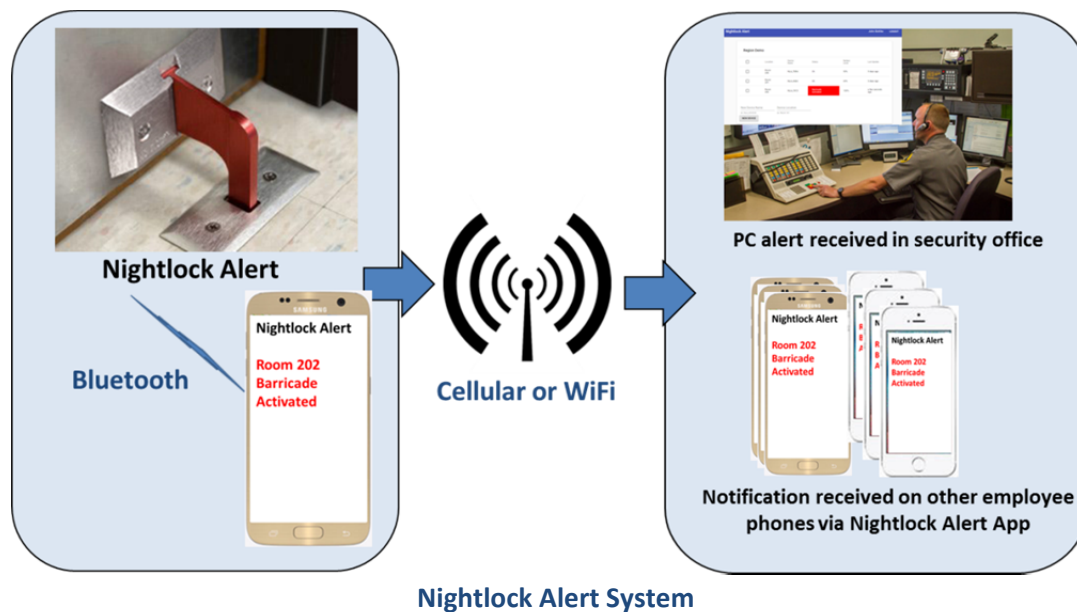

General Description

The Nightlock® Alert system provides protection and notification for emergency lockdown situations to prevent an act of terrorism, such as an active shooter. The room occupant simply drops the locking handle into the floorplate and Nightlock Alert automatically notifies the security office and all user smartphones regarding the lockdown emergency.

When a user opens the wall box to access the barricade handle, the Nightlock Alert module detects the emergency, connects to any user smartphone (Android or iPhone) within range and automatically sends the emergency notification to all department users and to the security office computer. The emergency notification indicates which specific room(s) has activated the door barricade.

Nightlock Alert not only protects the occupants of the room that is in lockdown but the notification instantly alerts the rest of the personnel within the building(s) to take appropriate action.

Door Barricade

- The Nightlock door barricade is easy enough for even a child to deploy in case of emergency
- A breaching tool is provided to building security and law enforcement and can release the barricade in seconds

Alert

- The alert function automatically transmits an agency-wide notification when the barricade locking arm is removed from the case
- All smartphones with the Nightlock Alert app and security office PC's receive notification with barricade status and room location
- Situational awareness of all barricaded rooms in seconds
- No other input required

Nightlock Alert

Door Barricade and Notification System

Protects

- Schools / Campus
- Businesses
- Military and Government Buildings

This is how some doors have been barricaded in the past – very slow and ineffective

Nightlock Alert provides a fast and effective solution with automated notification

Meets 2018 International Fire Code 1010.1.4.4

Locking arrangements in educational occupancies. In Group E and Group B educational occupancies, egress doors from classrooms, offices and other occupied rooms shall be permitted to be provided with locking arrangements designed to keep intruders from entering the room where all of the following conditions are met:

- ✓ The door shall be capable of being unlocked from outside the room with a key or other approved means
- ✓ The door shall be openable from within the room in accordance with Section 1010.1.9
- ✓ Modifications shall not be made to listed panic hardware, fire door hardware or door closers
